

**Main logo**

Change to Green/White logo so that text is not lost on main background. Need to harmonize colors with the rest of the i4 app – either shift this to those colors or those colors to this scheme

**Initial Arrival**

This is a little confusing. We arrive in the “Day” view, but the header still shows a week, and the detail shows cases for a different week. It should show the selected day, and default to today’s date. For week view, it should default to the current week. Add date selector and “Today” button to select this date. Add underline or bold to indicate the selected machine.

**Facility Selection**

- How is this list populated? Does it inherit the facility selection from the i4connected user?
- Can we add hierarchy if user can access multiple crematoria
- How is the picklist ordered?

PREFERRED APPROACH

## Week view

Looks great, but we need a way to show more detail for a particular case. Touch case opens a modal window with more case info. Can we offer edit based on user permission level?

## Unscheduled cases

Add case status to unscheduled cases

The screenshot displays the Matthews Environmental software interface. The top navigation bar includes the logo, a date range selector for "Week 38 | 10 Sep - 16 Sep", and buttons for "Add case", "Facility statuses", and "Woodlawn Cemetery...". Below the navigation bar, a calendar grid shows dates from 10 Sep to 16 Sep. A case card for "ID 10100 John 7 Doe" is visible on the 14th. A modal window is open, displaying detailed information for this case:

- ID: 10100
- Name: John 7 Doe
- Status: Ready to Cremate
- Container: Cardboard
- Weight: 223 kg
- Scheduled: 13-Oct-2023 03:15 pm
- Device: Cremator 1

On the right side, a panel titled "Unscheduled cases" lists cases by selected facility. The first case is "ID FY554QQ FRANCISCA23 SAMPSON", with details "66 kg | Female | Cardboard Standard | Simulation 2" and a status "Ready to Cremate".

### Edit Status codes for this facility

This function should be available to roles for site manager and above, and should not appear here. We may want to place it with other site maintenance activities. How does this relate to the organization unit hierarchy that is used elsewhere in i4connected?
