

**Login Screen:**  
Replace logo and add app title

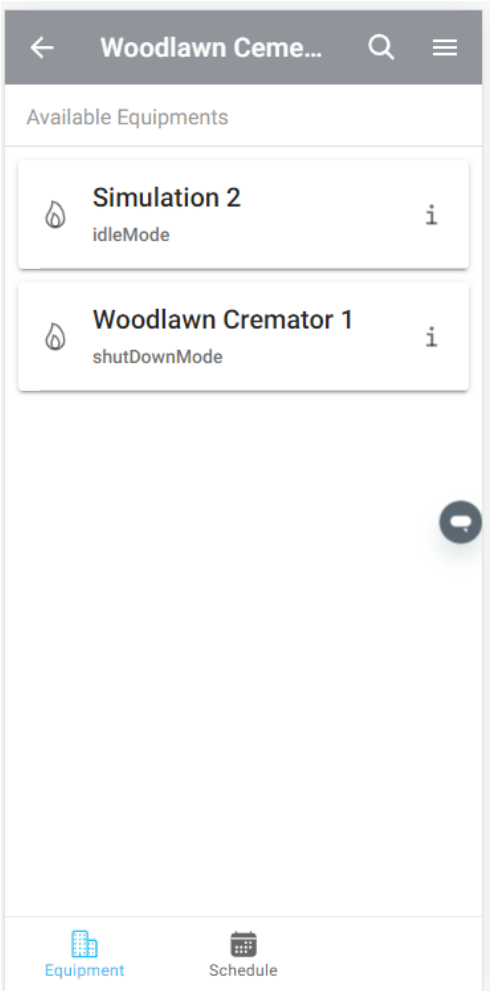

**Facility Selection:**  
Change heading to “Select Facility”  
Do facilities correspond to “Sites” in i4connected? If so, should we be consistent with language to avoid user confusion?

**Chat window:**  
Where does “Matthews” heading come from?  
Configuration of chat widget?  
Need to change logo  
Can we send facility ID and machine ID as we do with chat that originates on the Machine HMI?

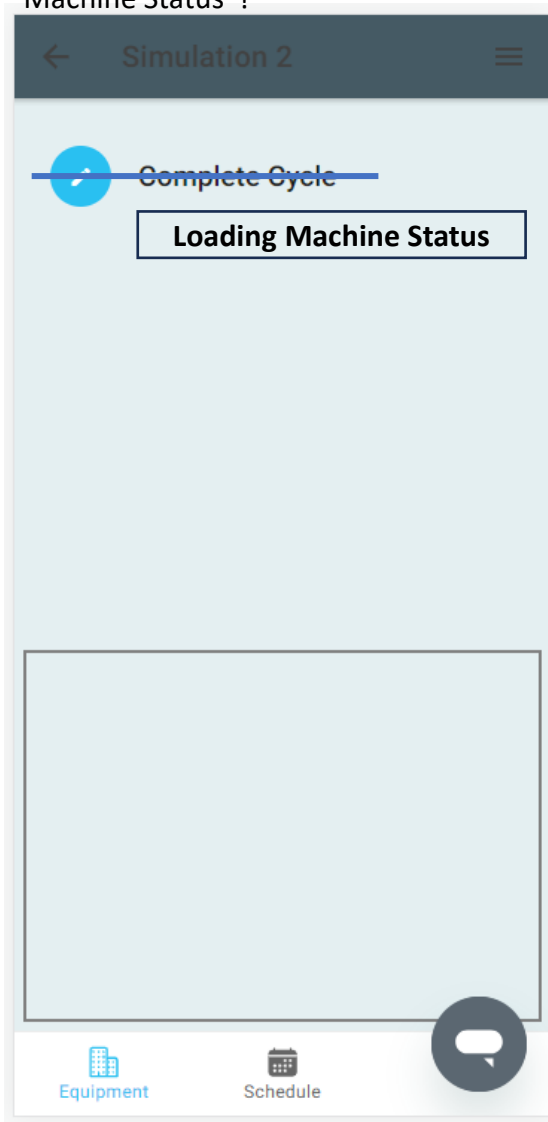

**Machine Selection:**  
Change “Equipments” to “Equipment”  
  
Does “Equipment” correspond to Machines in i4connected? If so should we be consistent with language to avoid user confusion?

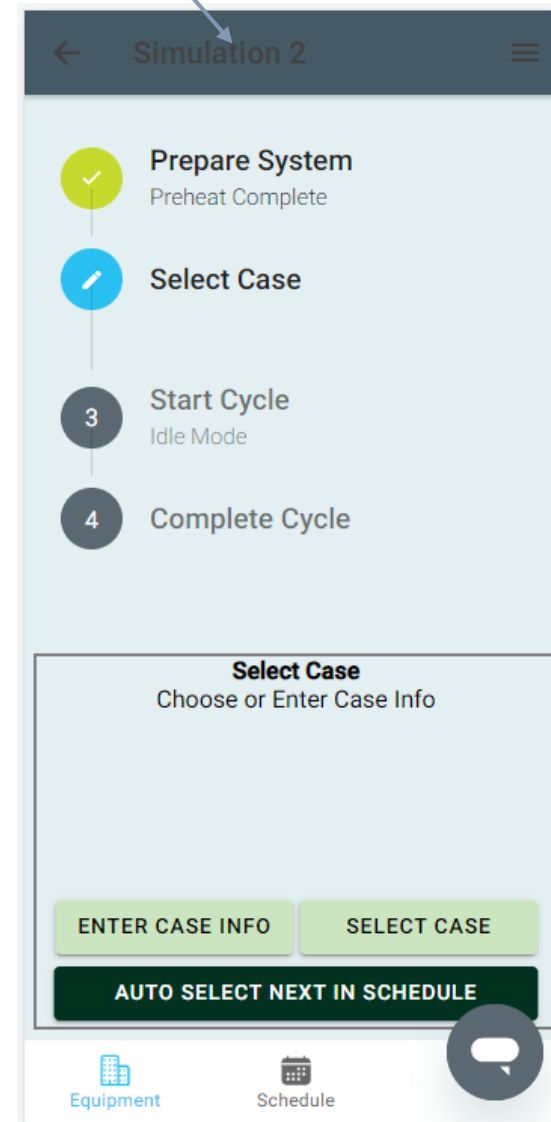

### Selected Machine:

When machine is selected, view shifts to “Complete Cycle” which could be confusing. Can we shift to “Loading Machine Status”?

### Selected Machine:

Machine name and menu icon should be visible – I suspect it's a font/CSS issue

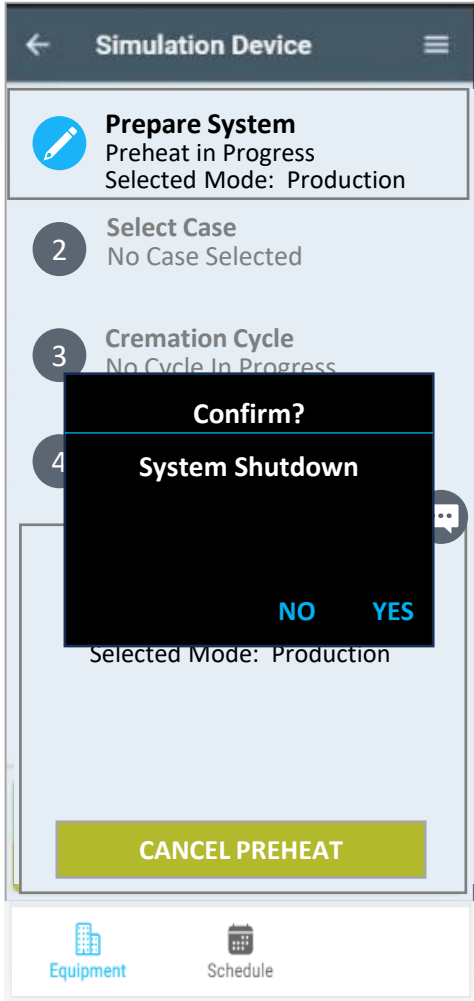

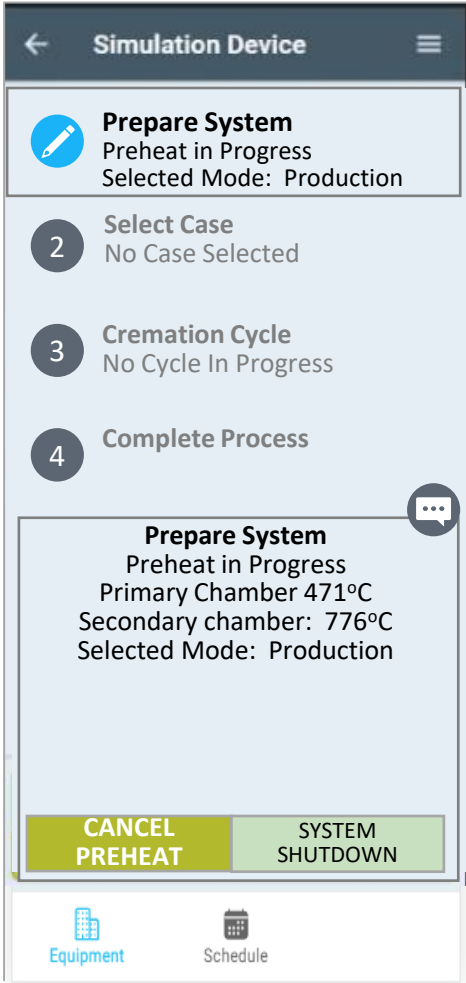

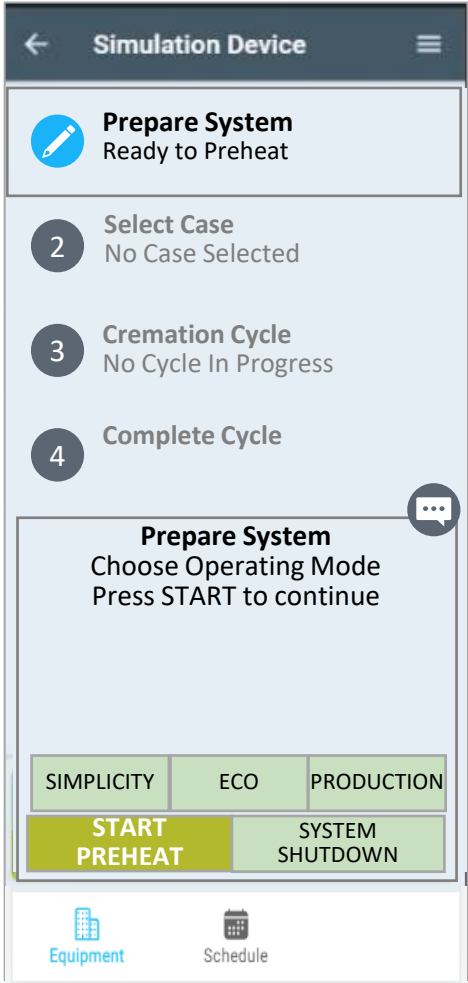

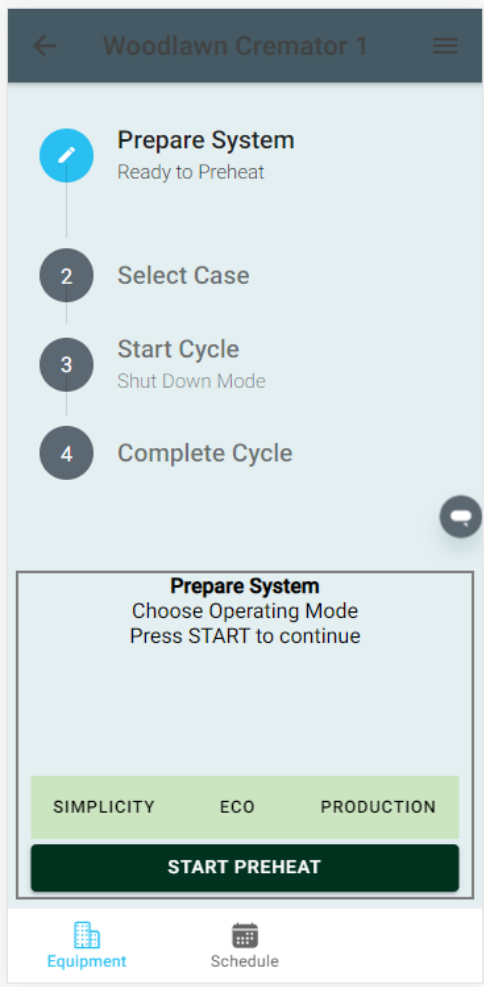

**Prepare system – current:**  
Change main heading text to white.  
No way to abort operation

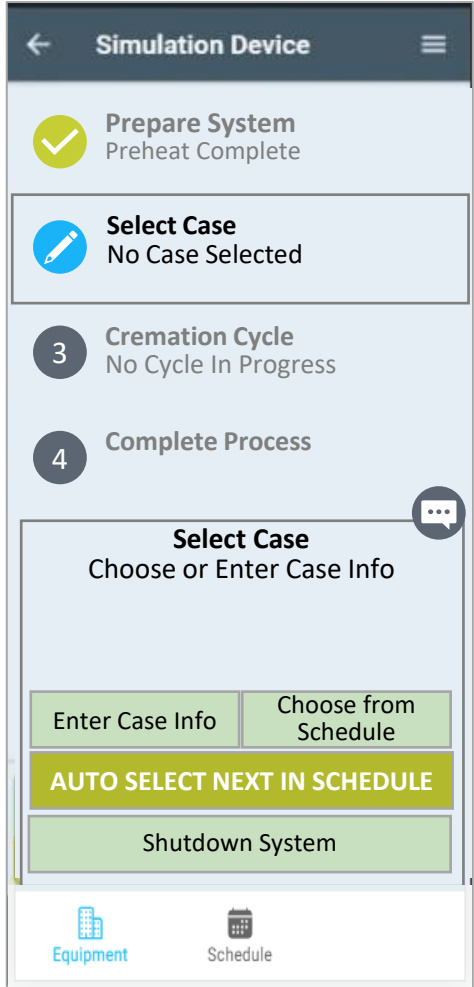

- Prepare system - preferred**
- Add buttons for abort a preheat operation (Vinny to confirm state – whether it is cancel preheat or system Shutdown)
  - Expand info panel if necessary

**Preheat underway:**  
Lower panel updates to show all detail for the selected step. Upper step area shows only 3 lines.  
Two buttons in information panel: Cancel Preheat and System Shutdown. Cancel preheat returns to state ??.

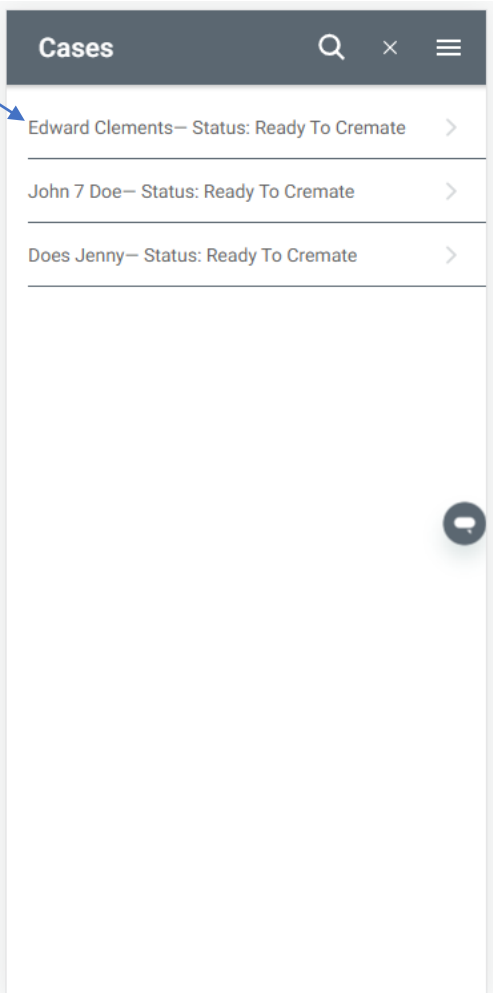

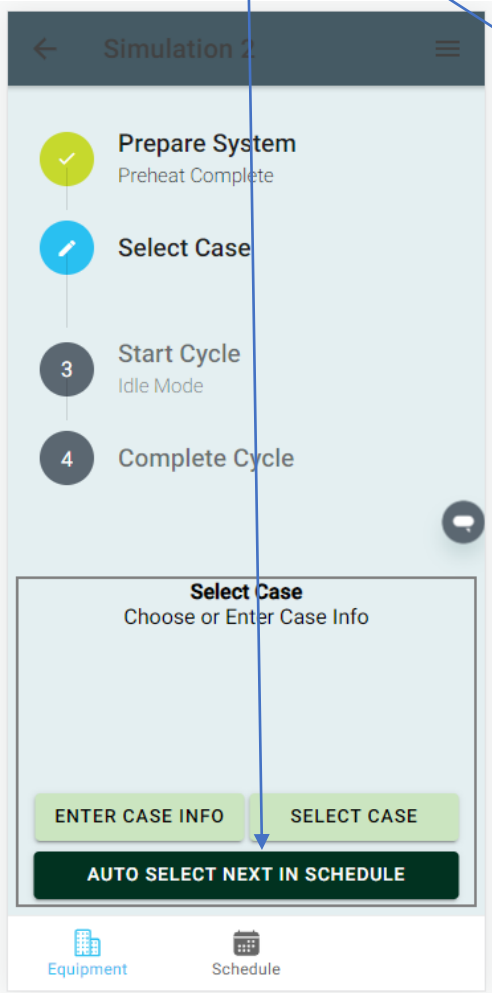

**Cancel operation**  
Confirmation dialog is modal popup.  
Same approach for cancel preheat or system shutdown

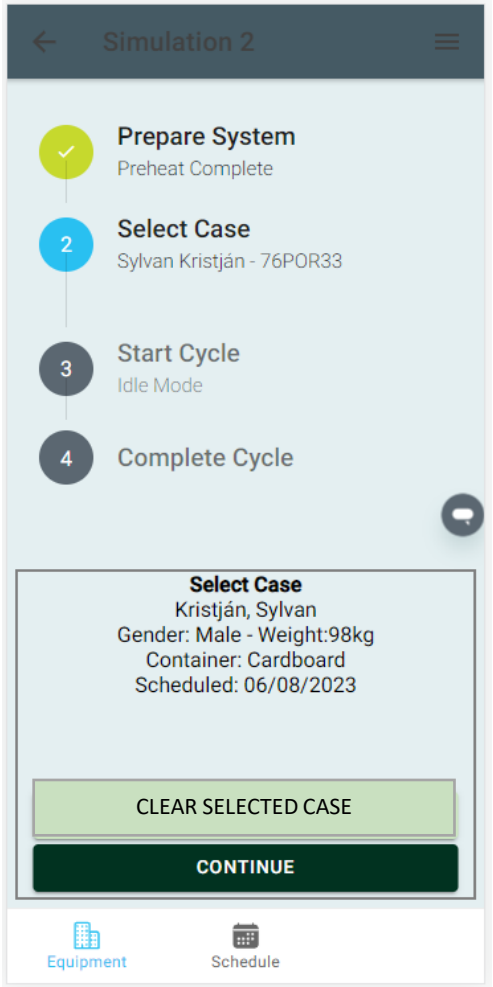

**Select Case – State 1:**  
In step area, show “No Case Selected”  
Completed steps show icon and shade text to grey. Next step is auto selected, wit “Edit” icon and loading information panel.  
Need a way to go backwards and cancel this operation – add system shutdown or return to idle state

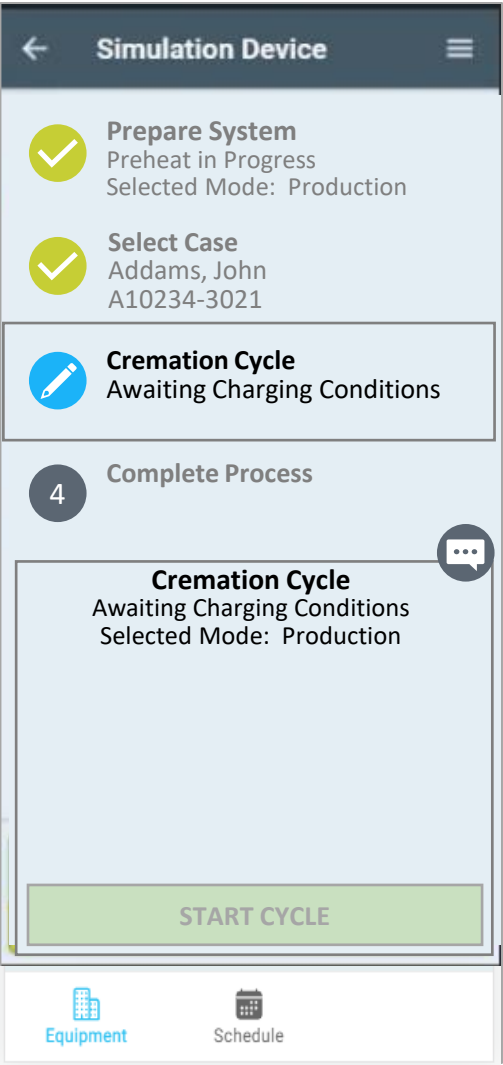

**Auto-Select**  
Auto-Select button does not appear to work. Touching the button does nothing, even when there are cases listed in the schedule.

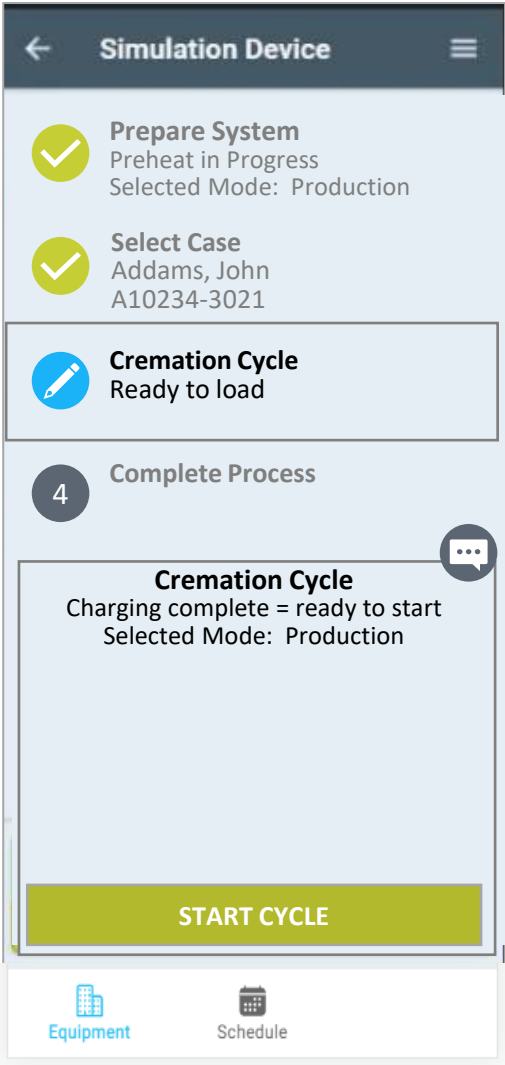

**Case Selected**  
Once selected, add button to clear selected case. This reverts to the previous screen, where user has the option to Enter, Choose or Auto-Select

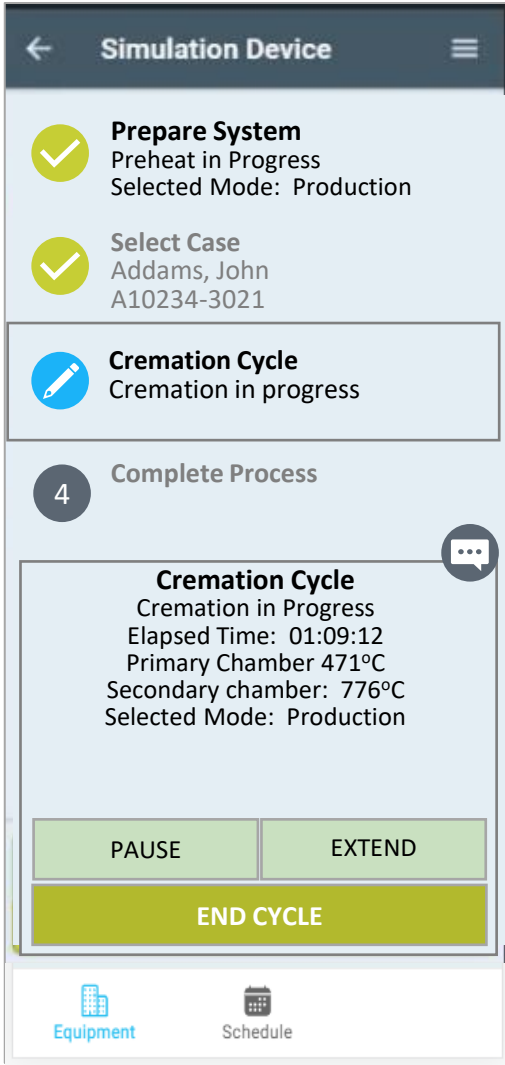

When charging conditions have **not** been met, show START button as disabled

When status indicates charging is complete enable 'START' button.

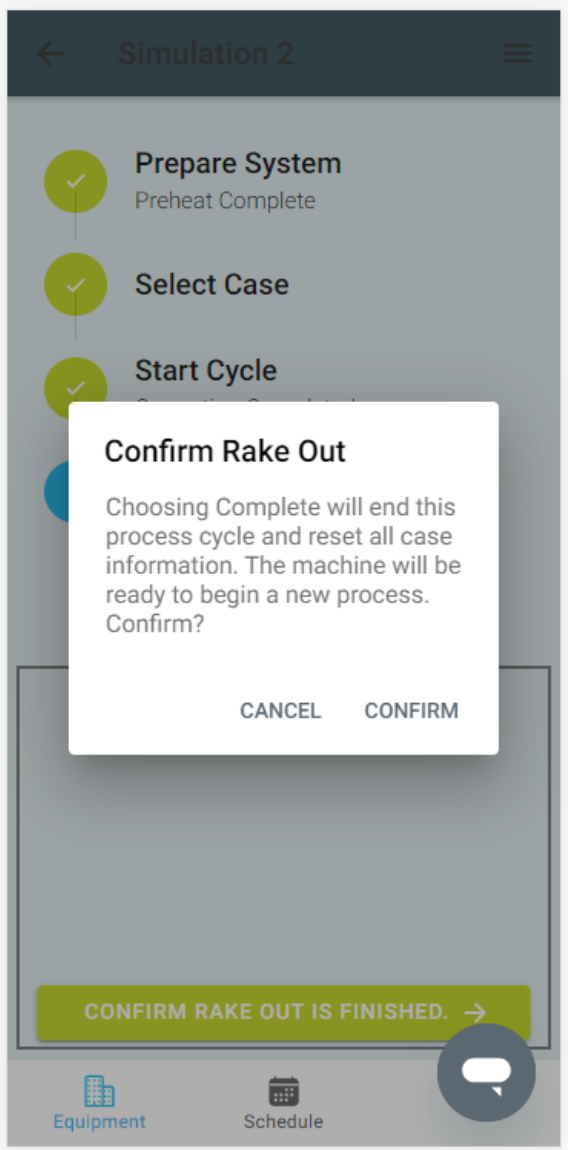

When Cycle Starts, update status information and show Pause/Extend/End buttons

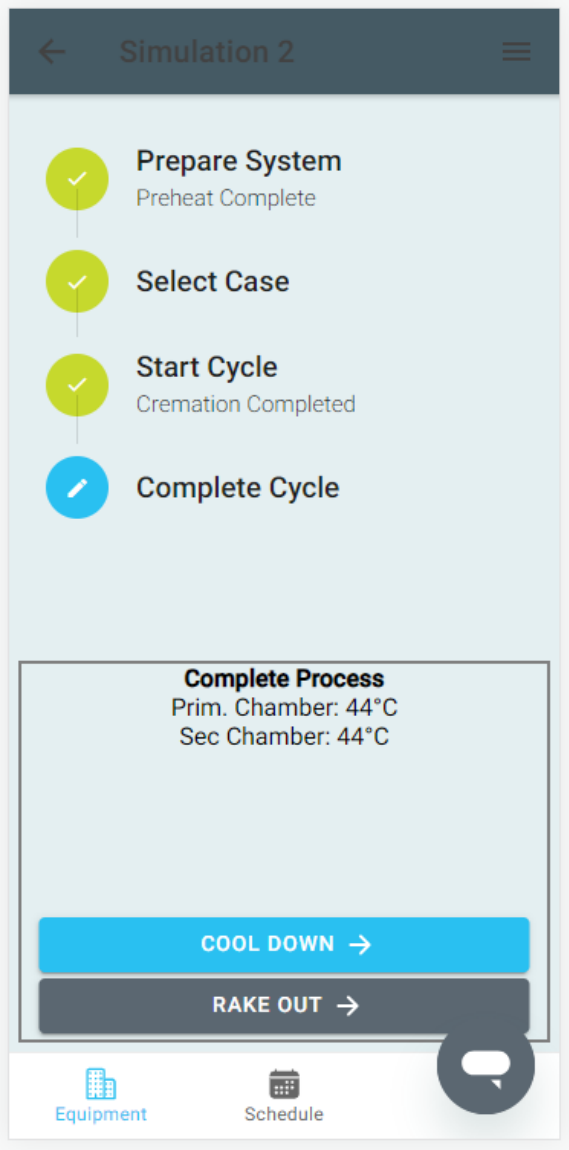

**Rake Out**

When rake out is confirmed, machine should return to Prepare System state, based on secondary chamber temp

**Rake Out**

Unfortunately, it returns to the “Complete Process” step until cooldown is complete. This defeats the purpose of ending the cycle.

Schedule

Need a way to identify and control which cases are shown here. Are these scheduled cases, unscheduled cases or all cases. Need to be able to sort and filter by machine and date/time. Add schedule time to display

### After machine selection

Can we change the display to show that we are waiting for device status to load?  
Showing "Complete Cycle" is confusing when that machine is in a different state.

Simulation Device

~~Complete Cycle~~  
Machine Status Loading

### Case Entry

Need a unit of measure (kg. lbs. etc.) for the weight. This will be important in analytics later.

### Schedule entry

Schedule still shows both scheduled and unscheduled cases with no way to filter them. Does it also show completed cases?

## Alarms

We need to add handling for alarms and alerts

## Alarm Detail

Touching alarm notification displays help for the selected alarm, via help database.
